

Project Update

OCTOBER 2026

Goyder North Wind Farm

-  A part of Neoen's Goyder Renewables Zone
-  To be built in two stages
-  Stage 1: 346 MW
-  Follows the commencement of construction of the Goyder Battery

Construction begins at Goyder North Wind Farm Stage 1

Overview

- The wind farm will have 48 turbines and is expected to be up and running in 2029
- Crews on site from November
- Around 500 construction jobs are expected
- Local supplier and jobseeker workshops will be held in the coming months
- Two temporary workers' camps are proposed to reduce stress on local housing
- Additional contribution to the existing Community Benefit-Sharing Program

Project contractors

Neoen has appointed Vestas as the contractor for the wind farm, including the supply of the wind turbines, and Downer to deliver the overhead transmission line to connect the wind farm to the grid.

Regional Development Australia (RDA) Yorke and Mid North will support local businesses to prepare for potential opportunities, including developing capability statements and connecting businesses with project contractors.

Job seekers

The project is expected to create around 500 jobs during construction and more than 10 ongoing operational roles. Neoen will host local supplier and jobseeker workshops in the coming months to help businesses and workers understand upcoming opportunities.

Accommodation

To ease pressure on local housing, Neoen is proposing temporary workers' accommodation for approximately 300 workers across two locations. One at the former Aberdeen Football Oval and another at an existing location south of Burra. These camps aim to reduce stress on local housing while ensuring the economic benefit of the construction workforce is received by local businesses and suppliers.

Shop front

Stop by our shop front in Burra, our Community Liaison Officer, Fiona Hill, is available Tuesdays and Wednesdays.

7-9 Commercial St, Burra, SA 5417
